Note on Pagination

The Proceedings of the Sixth European Meeting on Ferroelectricity are being published in four volumes of FERROELECTRICS (Volumes 78, 79, 80, and 81). To facilitate indexing and referring to these proceedings, the page numbers of Volumes 79, 80, and 81 will run continuously from the end of Volume 78. An author index will appear at the end of each volume.

PROCEEDINGS

Guest Editorial

The volumes 78, 79, 80 and 81 of Ferroelectrics comprise the Proceedings of the 6th European Meeting on Ferroelectricity (abbreviated as 6 EMF) held in Poznań, Poland, from 7 to 11 September, 1987. The Meeting was organized jointly by the Institute of Molecular Physics of the Polish Academy of Sciences and the Institute of Physics of the Adam Mickiewicz University. This was the sixth meeting of the series of conferences held in every fourth year in Europe and gathered 286 participants (12 from overseas countries), 41 invited talks in the form of 45 min or 30 min presentations were given in the plenary sessions and 284 contributed papers were continuously displayed as posters during the three days of the Meeting. The Proceedings include 34 invited and 255 contributed papers, the latter were refereed.

Relatively large parts of the program was devoted to the incommensurate systems and dipolar glasses studied by a variety of techniques. Particular emphasis was put on the methods of radiospectroscopy in the studies of ferroelectrics thus manifesting the biennial RAMIS Conference on Radio- and Microwave Spectroscopy which was held in the year 1987. Moreover, the evidence of ferroelectric properties in liquid crystals and polymers was presented at the Conference. Apart from the well established aspects of ferroelectricity, several scientists made a survey of the cooperation phenomena in ferroelastics and superionics. A talk on the most exciting contemporary subject of high temperature superconductivity, presented by Prof. K. A. Müller (Zürich) was applauded by the ferroelectric community since its origin can be derived from the continued development of the science of ferroelectrics.

The Organizers would like to thank the invited speakers and all the authors and participants for their contributions that we hope made the 6-EMF an interesting conference.

Finally, it is a pleasure to acknowledge the support of Dr. G. W. Taylor, the Editor of the FERROELECTRICS and the help of our colleagues, especially Maria Polomska and Czesław Pawlacyk in the preparation of these Proceedings.
